

SOAP Oil Data Submission Information

TANGO's Concert API allows integration with 3rd party systems. This ensures up-to-date data is in sync between TANGO and users' systems.

For example, Oil Sample Data can be synced through the Concert API to Oilography. Oilography then updates TANGO to ensure TANGO's data is consistent with the user's oil lab data.

To do this, Oilography uses SOAP webservices to communicate with oil lab-created webservices. Typically, oil labs have premade webservice available for this communication.

With the Concert API, both Oilography and the oil lab may initiate the information exchange. The other system will respond to the request.

Below are the Oil Sample Data requests/responses available through Concert API.

Oil Data Submission

- [Add Oil Data Set Comments](#)
- [Fetch Comment Type List](#)
- [Fetch Linked Document Type List](#)
- [Fetch Oil Data Set Status List](#)
- [Fetch Oil Test List](#)
- [Fetch Oil Value Lab Status List](#)
- [Move Sample to Another Sample Point](#)
- [Send Sample Data to Partner Service](#)
- [Submit Oil Sample Points](#)
- [Submit Oil Test Data](#)
- [Swap Oil Data Set Location](#)
- [Update TF7 Sample Code with Lab Sample Code](#)
